Patient	Remarks
-HIS ID	Currently it available for all patients coming to CHAF irrespective of where they come from. Only if for reason when HIS itself is down then it is not available and in that role of RIS-RegNum becomes mandatory thus RIS will always have it whether used or not.
RIS-RegNum	A field generated automatically in RIS but unique for each patient. It will serve as standby for HIS ID.
RIS-InvNum	More than one RIS-InvNumber will be mapped to same HIS/RIS-RegNum and as an example a patient with one HIS/RIS-RegNum say 123/1123 may have requirement of X-RAY Chest and X-RAY Left Leg. In that case, there will be two RIS-InvNum i.e. say 10001 for X-RAY Chest and 10002 for X-RAY Left Leg. This number can itself be searched and will indicate whether the patient was given an appointment for this investigation (e.g. X-RAY Chest) or not since registration, if appointment was given then was he/she examined or not on the day of appointment (e.g. may not report only), if examined what happened to his report i.e. was it generated or not, if generated was it validated or not.
-Mobile number	Will be used for searching the patient's radiology records in RIS and if more than one patient found, then option of select whoever is needed.
-Name	First and last name
-Gender	Male/Female/Others
-DOB	Date of birth: To compute age

Patient	Remarks
-R-INV	Radiology investigation **or investigations** sought by the referring doctor.
-Priority	Normal, Urgent (within a week's time), Emergency (i.e. today and immediate), Today(within next 24 hours)
-Clinical Note	Brief note from the referring doctor
-Special Instruction	As desired by the referring doctor for a radiologist.
